

# Contract for Mi-Log

We propose to make 'Mi-Log' for The Berkshire Group in Greenwood Village with the following understandings:

What we propose to make and/or do:

*A mileage logger for use by drivers employed by The Berkshire Group, built over the span of one academic semester.*

What we need from The Berkshire Group to accomplish this task:

*At least, biweekly (can be more frequent) communication to discuss the project and our progress, test data, company-specific design preferences. Communication can be as specific or lax as desired.*

What will happen when these guidelines change:

*Requirements naturally change during the development of a project, but these changes must be agreed upon, given adequate time to implement, and may affect what components are delivered in the end.*

What we expect in compensation:

*You will be giving us a grade for our work on this project, and it will have a substantial impact on our overall grade for our Software Engineering course. We are not looking for monetary compensation but are open to discuss it at a later date if The Berkshire Group wants to.*

What limitations we have:

*We are a student team and this is a semester long, student project. This project comes with no particular guarantees, including specifically, warranty or suitability for a particular purpose, or long-term support.*

Ownership and Fair Use of Intellectual Property

*The Intellectual Property created during this project is granted permanently for use and extension by The Berkshire Group, but is ultimately owned by the respective creator(s) who are not limited to reuse or extending this work elsewhere.*

Signed:
